

细菌耐药防控

# 中国 在行动

邱海波

中华医学会重症医学分会 前主任委员

耐药防控 深入人心

邱海波

## 我是一名重症医学专家

临床细菌耐药的防控，首先是要对重症病人、感染病人的早期识别。识别之后，给予正确的抗菌药物、恰当的抗菌药物、有效的抗菌药物治疗，并对临床的疗效进行观察。只要将合理用药的意识扎根到医务人员的心里，抗击细菌耐药的行动才能够成功。

遏制细菌耐药，合理使用抗菌药物

国家卫健委抗菌药物临床应用与细菌耐药评价专家委员会

## Haibo Qiu

Former director of the Chinese Society of Critical Care Medicine(CSCCM)

TAKE ACTION TODAY

**I am** a specialist in clinical diagnosis and treatment of critical diseases.

The first part of prevention and control of clinical bacterial resistance is early identification of critical patients and infected patients. After recognition, give them correct, appropriate and effective antibiotics and observe the clinical effectiveness of these medicines. Only if the awareness of rational drug usage is rooted in the hearts of medical staff, can our action against bacterial resistance be successful.
