

I'm a resistance fighter™

Mathew Hersant

Undergraduate student
Norwich, Norfolk, England

Combating antimicrobial resistance (AMR)

Researching new adjunct therapeutics. I dedicated my undergraduate studies to fighting AMR by testing streptomycin with other antibiotics to develop adjunct therapeutics. My research found that clinical isolates of carbapenem resistant *A. baumannii* can be made susceptible to obsolete antibiotics through the mechanism of quorum inhibition. **Because all of us need to be resistance fighters.**
