

I'm a resistance fighter™

Robert Bell
Cofounder ProAgni

Robert Bell

Combating antimicrobial resistance (AMR)

This year alone over 700,000 people around the world will lose their lives due to infections that can't be treated with antibiotics. About 80% of the world's use of antibiotics end up in animal feeds. We at ProAgni are using Australian science and research to remove antibiotics and ionophores from livestock feed while maintaining healthy animal growth. We at ProAgni want to change the world, we want to make food that is safe for our future and the generations that follow us by producing ethical, lean, green antibiotic and ionophore free red meat. **Because all of us need to be resistance fighters.**
