

细菌耐药防控

中国 在行动

徐英春

国家卫健委抗菌药物临床应用
与细菌耐药评价专家委员会 办公室主任

加强感染专业发展

徐英春

我是一名临床微生物学专家

发现青霉素的科学家，亚历山大·弗莱明早有预言。“人们因无知而滥用青霉素，就要在道德上为他人的死亡负责，因为无知带来了耐药性的问题，会导致其他人因此而丧命。

我们要让大家知道，感染的治疗与防控，是非常专业的医学领域；临床医生需要专业的支持，我们要重视感染相关的学科建设，呼吁提升感染相关专业人员的待遇和地位，吸引更多的人才投身于此。

遏制细菌耐药，合理使用抗菌药物

国家卫健委抗菌药物临床应用与细菌耐药评价专家委员会

Office Director of the National Health Commission of the PRC Expert Committee
on the Clinical Application of Antibiotics and Evaluation of AMR

STRENGTHENING PROFESSIONAL DEVELOPMENT OF INFECTION KNOWLEDGE

Antimicrobial
Resistance Prevention
**CHINA
IN ACTION**

I am an expert in clinical microbiology.

Alexander Fleming, the scientist who discovered penicillin, had predicted that "People who abuse penicillin due to ignorance are morally responsible for the death of others, because ignorance leads to drug resistance that can result in the death of others."

We need to make sure everyone knows that the treatment and prevention of infection is a very professional field of medicine. Clinicians need professional support. We should value the development of infection-related disciplines and call for the promotion of the payment and improvement in the status of relevant professionals, so as to attract more talented personnel to join the word in this field.
